## Dealer Guide: How to Use the Smart Order Form

This guide will show you how to easily place your orders using our new automated system. By following these steps, you will know instantly if an item is in stock without having to wait two days for the warehouse to call you back.

### Step 1: Open the Official Template

- Please open the "BA.xlsx" file on your computer.
- Look at the tabs at the very bottom of the screen and make sure you click on the sheet named **Order Form**.

### Step 2: Pick Your Products

- Click on the first empty box under the **Product Name** column.
- You will see a small drop-down arrow appear on the right side of the box. Click it and select the exact item you want to order.
- *Important:* Please do not type the name manually. The form will only accept items from this list to prevent typing errors.

### Step 3: Watch the Form Auto-Fill

- Once you pick a product from the list, you don't need to look up the price. The **Category** and **Unit Price** boxes will magically fill themselves in based on our master data.

### Step 4: Enter Your Quantity

- Go to the **Order Qty** column and type the number of items you need.
- The **Total Price** column will instantly calculate the final cost for that specific item.

### Step 5: Save and Upload

- Review your list to make sure your quantities are correct.
- Save the "BA.xlsx" file and upload it to the system portal.
- The system will immediately check the warehouse stock. If everything is good, the warehouse will get a digital picking list to pack your items right away. If something is empty, you will get an instant alert so you can inform your customer immediately.
